

License Code

The License Code of Symantec SSL allow the software manufacturers to implement a digital signature in the programs and macros developed, ensuring their copyright, while transmitting the user authenticity and trust, that the digital signature ensures when it gives to that solution a safe identification and reliable source that created it. Since Microsoft Authenticode, Microsoft Office and VBA, Sun Java, Adobe Air, Macromedia Shockwave, and Marimba Castanet, all are likely to be signed by Symantec SSL license code; if for some reason the code is changed after signing, will be generated an warning to users telling them that the software is not reliable. It is thus not only an effective way of authentication, but also a guarantee of integrity.

Types of Applicable Software **Microsoft Authenticode Digital ID>>**

In conjunction with Microsoft Authenticode technology allows **digitally sign 32-bit or 64-bit. Exe files (PE archives),. Cab,. Dll e. Ocx, files.**
