Hacker-Secured Certification

"The license that protects you against the theft of personal data and fraud in the use of credit cards."

The safety of the infrastructure of the sites is a particularly sensitive issue, to which one can not remain indifferent, because sometimes the vulnerabilities may inadvertently be introduced by managers when implementing changes in the policies of the firewall, creating vulnerability to hackers, worms or Trojan horses . The only solution is to proactively monitor the network in order to meet the threats and implementing appropriate measures before the attackers take advantage of them. Beyond this aspect is also important to convey that to the end user can browse the site safely.

He was thinking about these things that MarketWare Europe launched the digital certificate Hacker Secured. This was not only designed and conceived with the aim of providing mechanisms that allow administrators to proactively monitor networks and preventively throughout its network, as well as convey confidence and assurance to users, they are protected against theft of personal data and fraud the use of credit cards.

Thus, the Hacker-Secured, validate through audits daily, weekly or monthly to sites, in order to pass safety tests in the FBI / SANS. When the site met the minimum requirements imposed by the best security practices will be awarded the certificate Hacker-Secured. In this situation you have the guarantee that in 99% of cases there will be no intrusions.
